TENTANG SAYA

I believe great software isn't just about syntax—it's about understanding what a business truly needs and building a bridge to get there. With experience ranging from Tesseract OCR integrations to robust database management, I bring a mix of technical grit and clear communication to every project. I'm looking to bring that same energy and "fast-learner" mindset to a team that values clean code and creative thinking.

PENDIDIKAN

SMK Negeri 2 Karanganyar
Software Engineering | July2022 - May 2025

PENDIDIKAN

Web Developer | CV. Wicitra Elang Lawu Project-Based April 2025

- Transform the company's digital presence by migrating the static PDF portfolio into a responsive and SEO-friendly Company Profile website.
- Improving the visibility and efficiency of corporate recruitment through a centralized platform for digital CV distribution and professional branding.
- Providing modern UI/UX solutions that replace old document formats with intuitive web experiences and adequate accessibility.

Backend Web Developer (Magang) | Phicos Group December 2024 – March 2025

- Building a high-performance Document Digitization system using Laravel 10 and REST API to simplify agency workflows.
- Integrating Tesseract OCR to automate text extraction from physical documents, significantly reducing manual data input time.
- Designing a scalable database structure using MySQL and SchemaBuilder Service to handle complex data.

Desktop Application Developer (Magang) | PIMC October 2024 – December 2024

- Developing and optimizing desktop-based accounting applications using Visual FoxPro 9.0 for specific financial consulting needs.
- Manage complex data relationships by integrating Microsoft Access 2010 and Excel Macro for financial report automation.
- Bridging the logic of the old system with modern needs, ensuring stability and accuracy in the company's financial data processing.
